

Strategic Parts Management global

- Parts Management at SMS group
- Using PARTapplication Server
- Challenges & Difficulties

Bernd Postaremczak, SMS group GmbH

19.02.2016

**Ironmaking and
direct reduction
plants**

**Metallurgical plants &
Environmental
technology**

Flat rolling plants

Tube and pipe plants

Long products plants

**Processing lines &
Furnace technology**

Forging plants

**Electrical &
Automation systems**

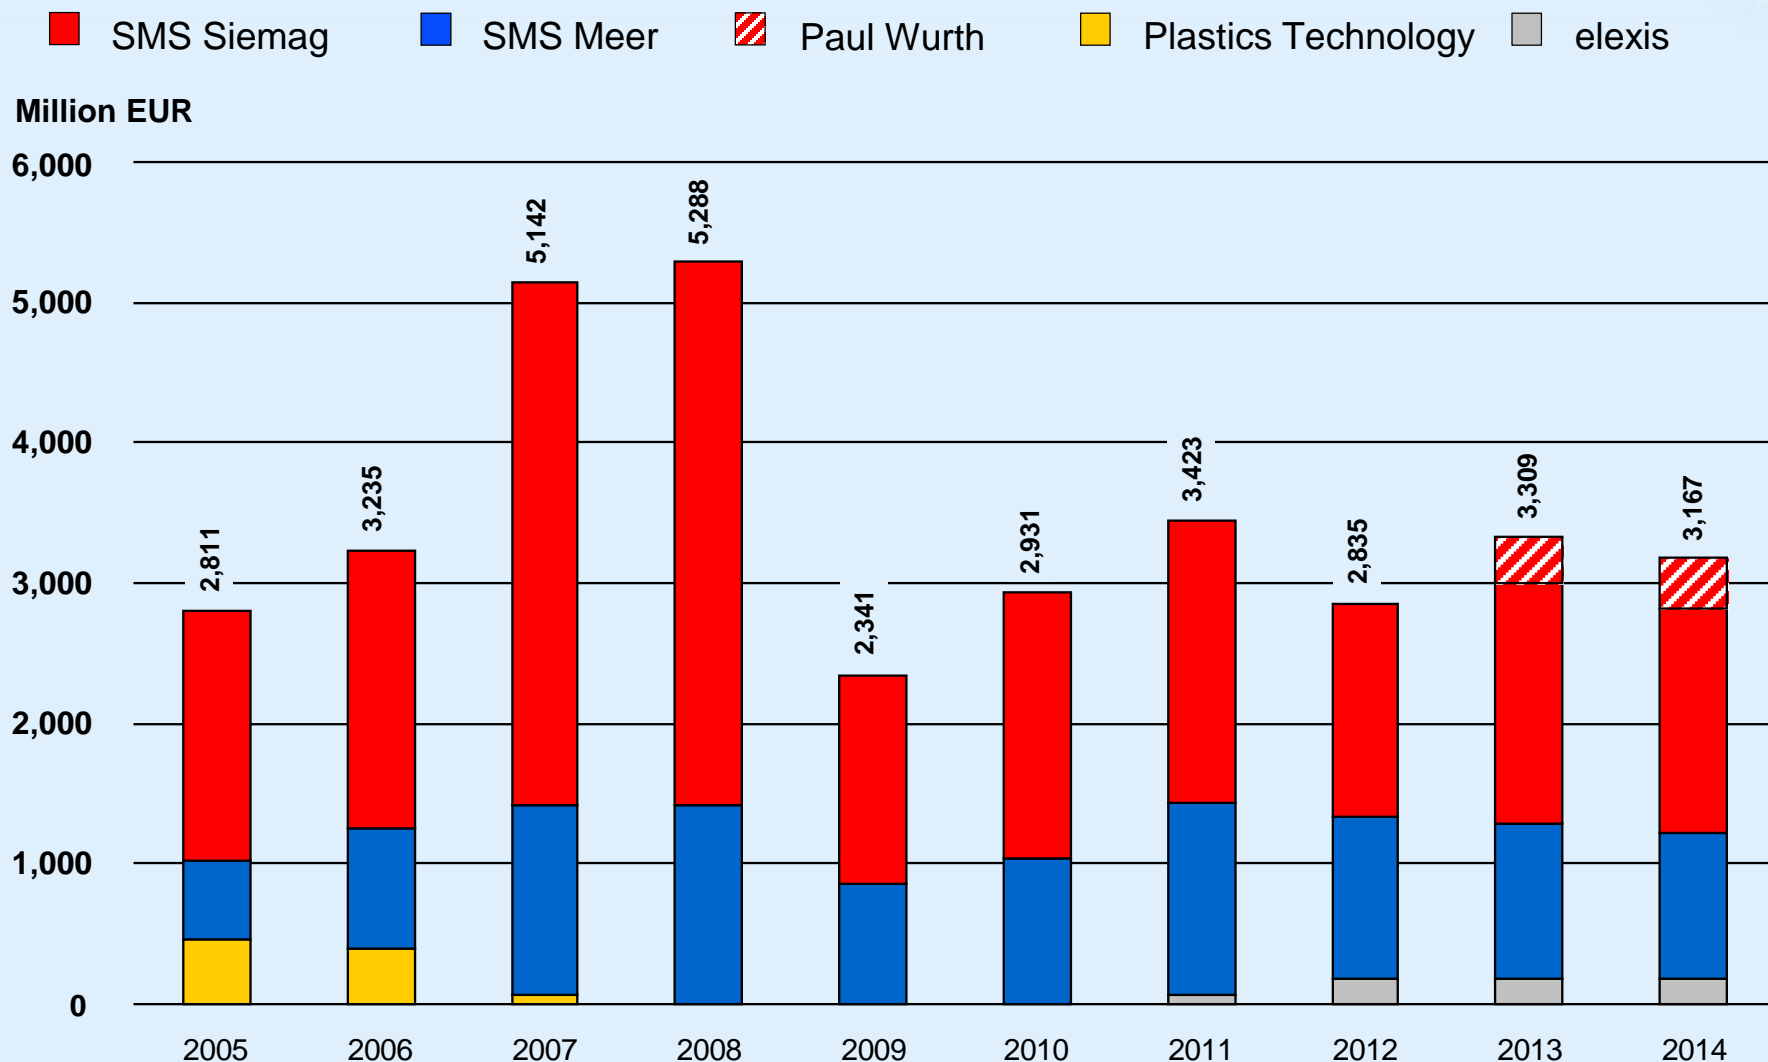

Production

Technical Service

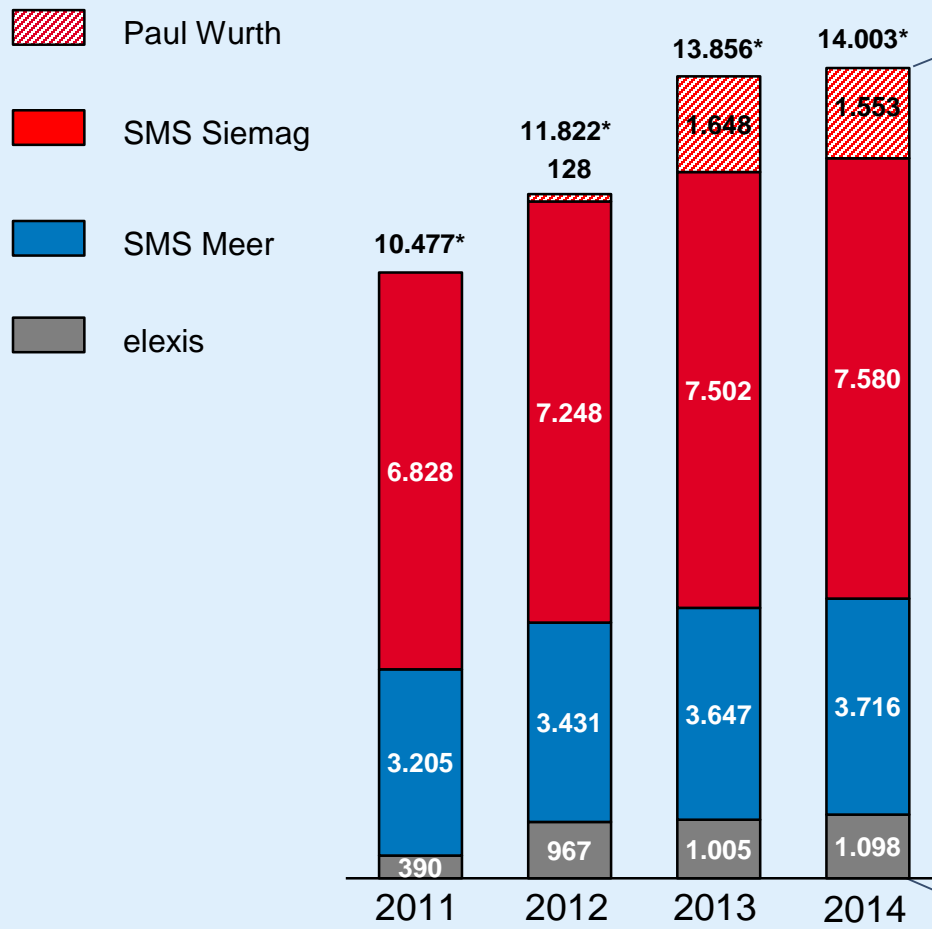

* including all other Divisions/consolidation

Apprentices in Germany

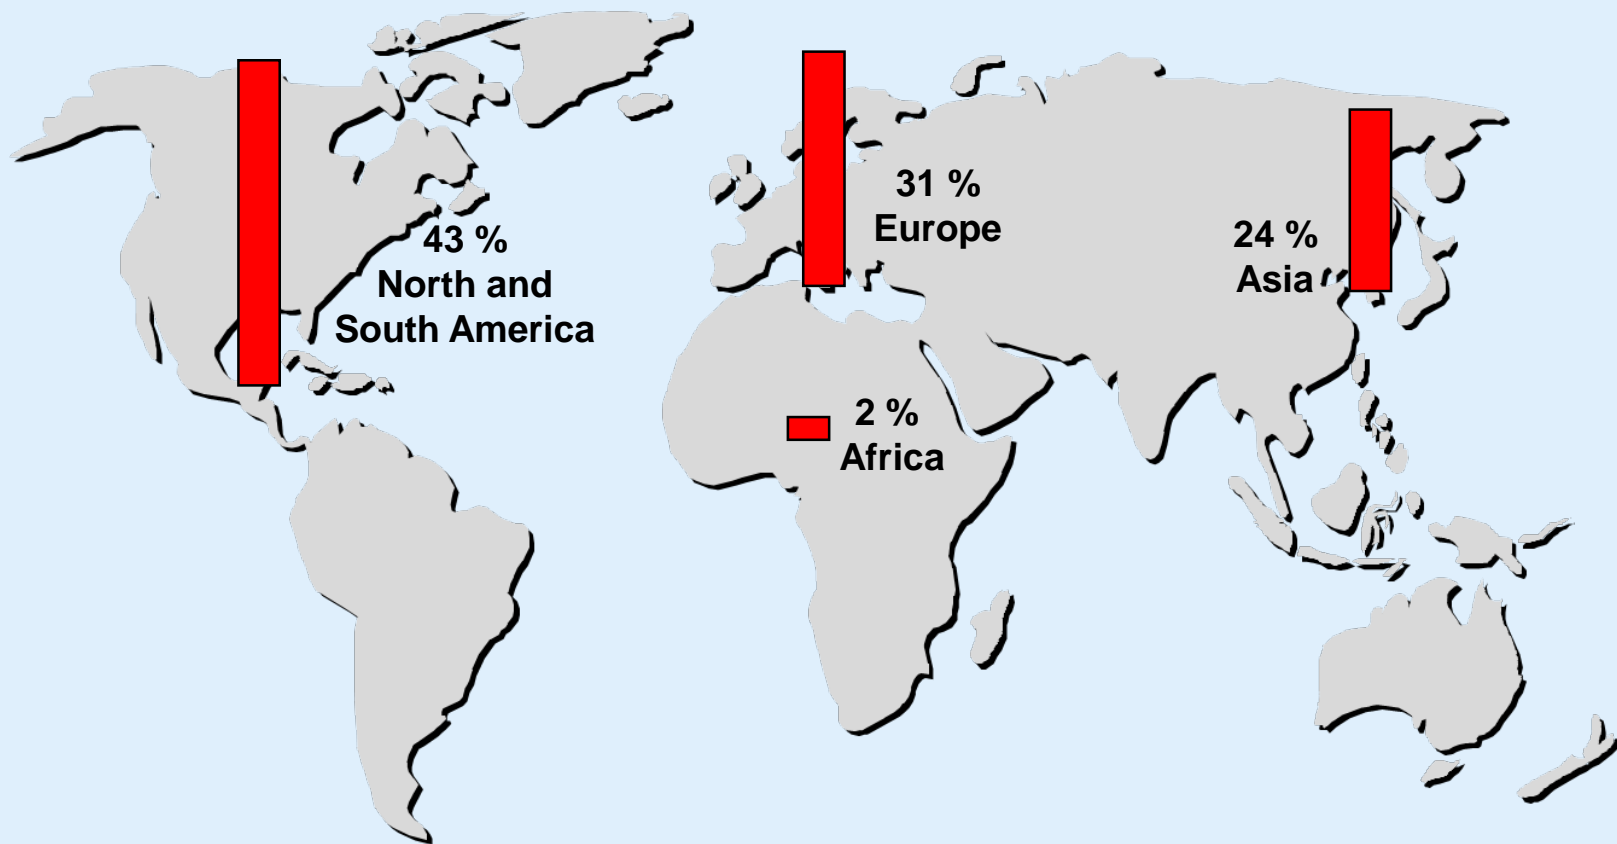

Employees abroad

Employees in Germany

* Annual average with trainees including others

Standard parts and catalog parts are designed and available for the designers that they know them, they can understand them and they can use them. The

- **Master data and class attributes**
- **the needed geometries in neutral PARTsolutions format**
- **SpecDrivenPiping relevant data and**
- **EPLAN-relevant data**

of standard parts and catalog parts are made according to the rules and are up-to-date.

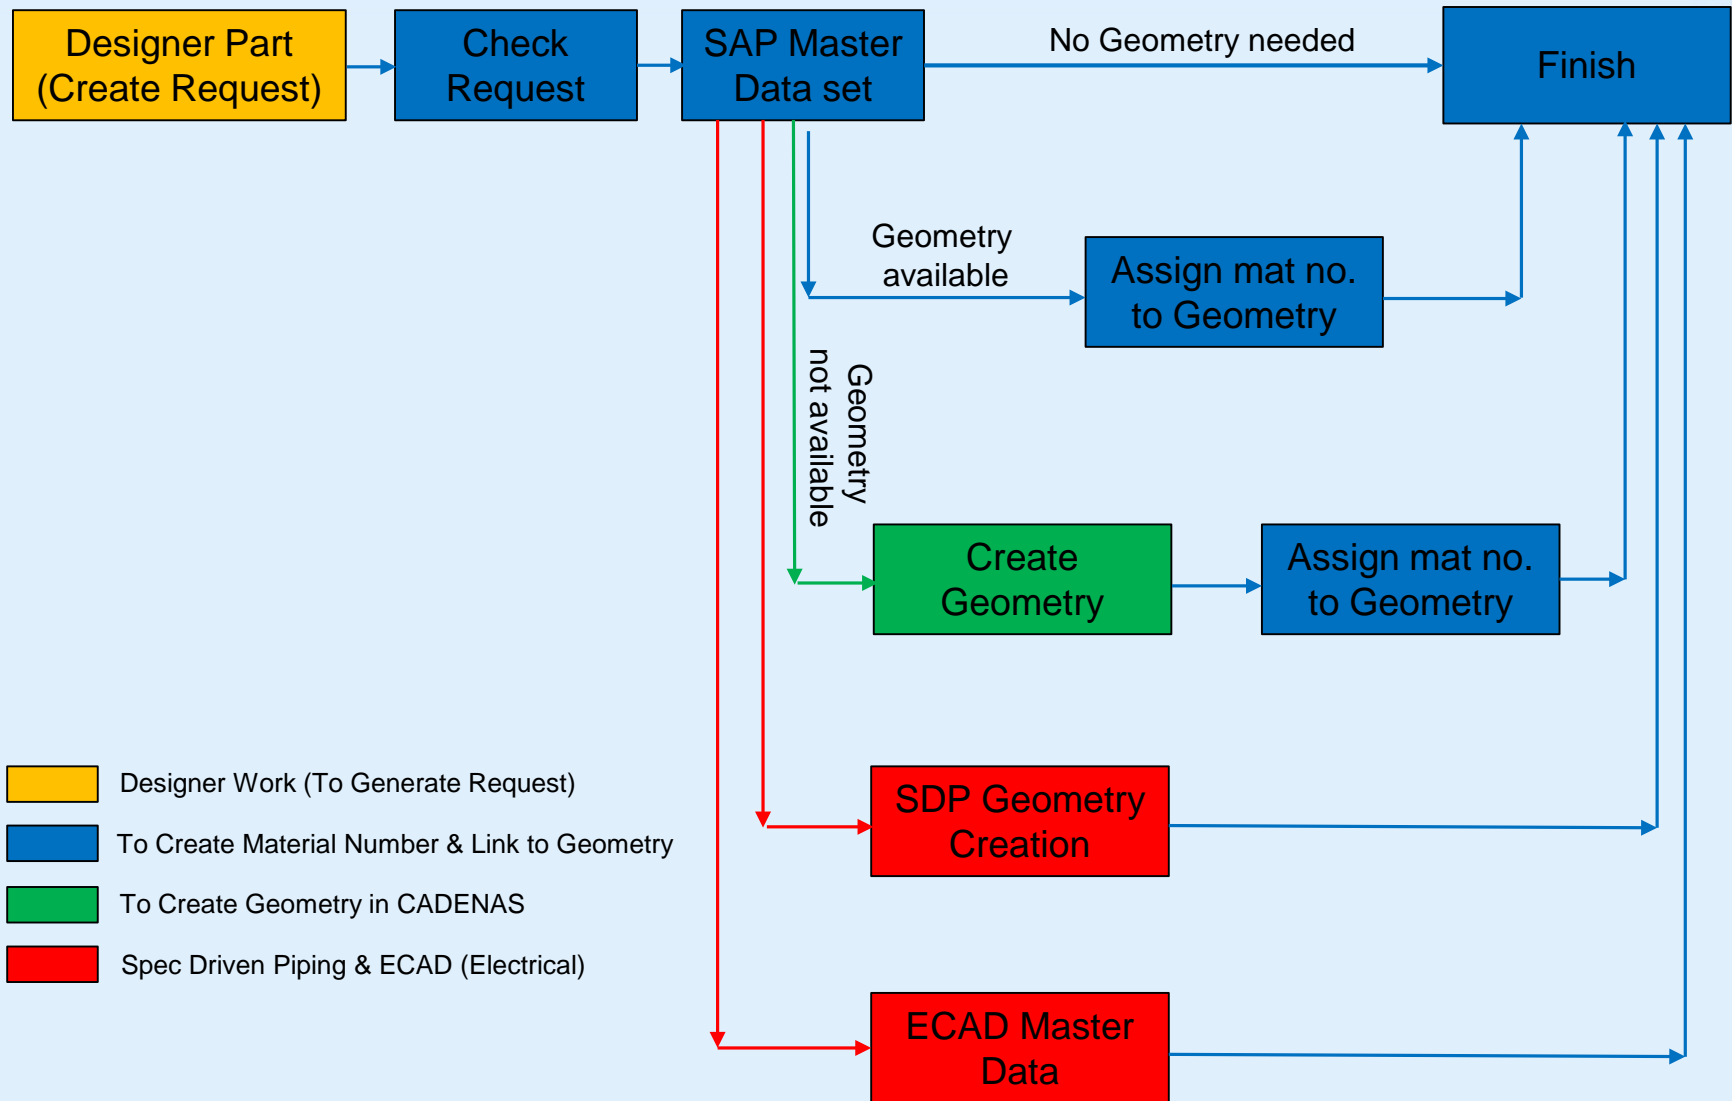

The Parts Management department has to take care that the diversity of parts are minimized and they offer standard parts preferred, if possible.

- **Allocation of needed and updating existing manufacturer catalogs/catalog parts in PARTsolutions (CADENAS)**
- **Make, update and offer SMS catalogs, catalog parts and standard parts in PARTsolutions (CADENAS)**
- **Make and update SAP master data of standard parts and catalog parts**
- **Make, update and offer standard geometries in SpecDrivenPiping (SDP)**
- **Make and update BOM's for standard pipeline classes.**

- **Handling (check, realization) of parts management work stock (PMWS)**
- **Training of the requesters in PMWS**
- **Make and update classes and class hierarchies in SAP**
- **Make, specify and update class attributes and value lists in SAP**
- **Classify standard parts and catalog parts**
- **Bulk evaluation in SAP and other data base systems (Data Mining)**
- **Administration and care of SDP data base**
- **Administration and configuration simus classmate**

- **15 staff in Germany at three locations for German speaking locations**
- **4 staff in India for foreign locations**
- **Across 55,000 standard parts (not invalid master data)**
- **Across 83,000 catalog parts (not invalid master data)**
- **Across 2,400 manufacturers for catalog parts (not suppliers!)**
- **Between 1,500 and 2,000 requests/month, thereof circa 1/5 standard parts**
- **Across 48,000 standard parts with CADENAS geometry (across 19,000 created by our self)**
- **Across 43,000 catalog parts with cadenas geometry (across 28,000 created by our self)**
- **Across 1,100 manufacturers in CADENAS**

Stand: 19.02.2016

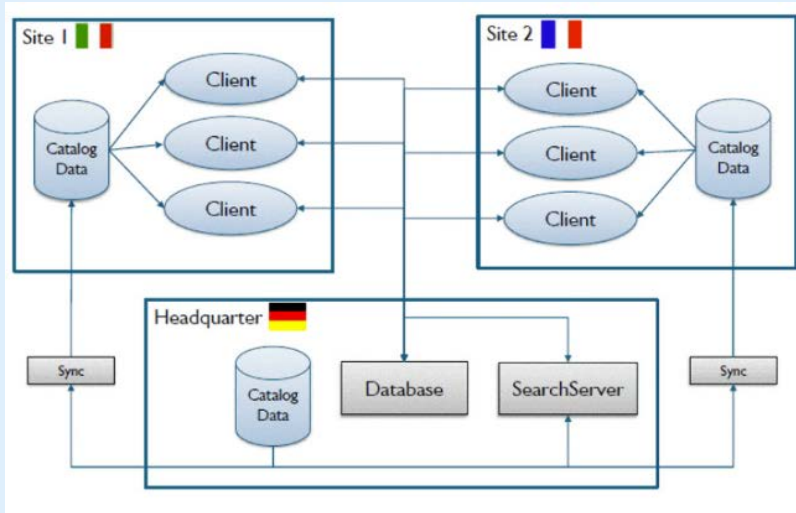

One catalog data base for all locations

CADENAS_DATA-folder:

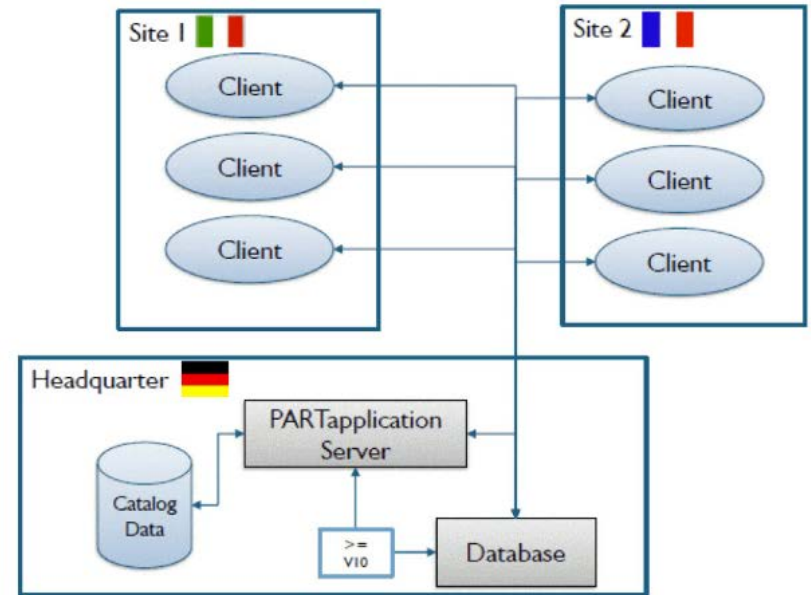

- **Across 100 GB data volume**
- **Across 2,5 Mio. files**
- **Across 83,000 folders**

Replication with Robocopy to the locations till March 2015

- **Disk space at every location**
- **Replication needs several hours**

New system architecture

- **Transforming from an international to a global player**
 - Rethinking in every division required
 - Not only work for a special manufacturer location
 - Foreign locations are no longer extended work bench
 - Requested standard parts and catalog parts are used world wide

- **Barrier of language**
 - Setup a PM department in India → all guidelines for PM have to be translated in English
 - Suddenly German PM staff has to speak English well
 - Make all standards and data sheets also available in English
 - Working in eCatalog in English (name of folders et cetera)
 - Bilingualism (DE/EN) of master data is no longer warranted → Designation catalog
 - English translation of the master data has to be according to the standard or according to the translation of the manufacturer. If not, you would not find anything.
 - Size/dimension and the decimal place

- **Integration of further companies of the SMS group**
 - Every SMS group company should be integrated in SAP until year 2020
 - Every integration means a ERP system switch for the integrated company
 - Every time a comparison of standard parts and catalog parts is needed
 - New standards (ASME/SAE/MSS/IS/GB/...)
 - New manufacturers
 - Minimizing diversity of parts is not possible
 - But: Double parts are avoided in a high level
